

World Tube Audio

It is our goal to offer you a complete Hifi package of highest value: Tube amplifier and loudspeaker kits, add-ons, high-end parts, all complete with set up and repair services.

Our kits offer not only excellent sound but also noble optics, comparable only to expensive finished products.

And everything for a very affordable price.

You intend to tweak your equipment or realize your own ideas?

We offer a range of parts which are difficult to obtain like printed circuit boards, mains transformers and output transformers from our production or other well-known producers at hard to beat prices.

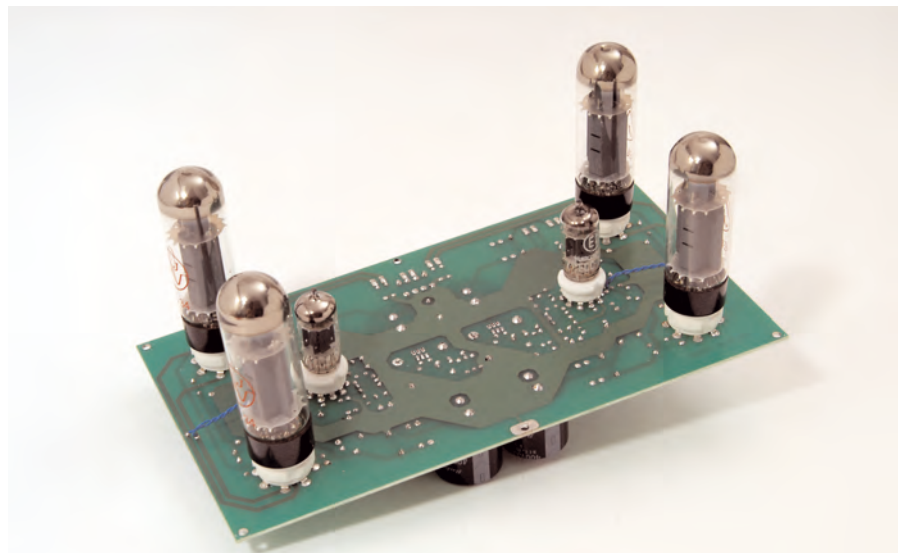

And if you once get stuck during assembly of one of your kits or modifying tube equipment, we will be happy to assist you with our building, repair, and modification services.

Our amplifiers are designed by Wolfgang Paltauf, the best known Austrian tube amp developer.

The circuits are refined to the last detail and not a remake of designs published in data books and the like.
