

# pure dynamics® el34i

The EL34 is the most popular tube among guitar players. This tube rocks! The circuit of our reference amplifier, the Pure Dynamics 2A3i, is put to work with the EL34 – giving outstanding sonic results!

Listening to it means endless fun, fun, fun, making the choice of the guitar player perfectly clear.

Care about your music!

Integrated amplifier with 5 relay switched line inputs and shortest possible signal path.

Selected EL34 pentode in a push-pull circuit with minimal negative feedback.

Power: 20W per channel. Two 6SL7GT are used for preamplification and phase splitting.

The high-end output transformer with two separated chambers was especially developed for optimal performance of the EL34. Best materials, a very large core for this output power, and the coil technique guarantee very good bandwidth: 7Hz-80kHz (-3db)!

Driver and power tubes are directly coupled, providing bandwidth and stable bias for the power tube even when grid current comes into play at full power.

Three separated stabilized but not regulated power supplies.

Mundorf tin-foil capacitors for signal coupling.

Optimized transformer placement.

Non-magnetic stainless steel housing.

High-End handmade in Austria.
